

Phase 4 – Process Automation (Admin)

#. Introduction

This phase introduces automation into DineTrack so that reservations, billing, and customer engagement happen without manual intervention. Using Validation Rules, Flows, Email Alerts, and Notifications, the system will ensure accuracy, prevent errors, and improve the dining experience.

#. Validation Rules:-

Purpose: To ensure data integrity by preventing wrong or duplicate entries.

Examples:

1. **Duplicate Booking Prevention:** Ensures that a table cannot be reserved more than once for the same date and time. The formula used is:

```
AND(  
  ISNEW(),  
  ISPICKVAL(Status__c, "Confirmed"),  
  NOT(ISBLANK(Table_Number__c)),  
  NOT(ISBLANK(Date__c)),  
  NOT(ISBLANK(Time__c))  
)
```

If the criteria are met, an error message is displayed: *"This table is already booked for the selected time."*

2. **Mandatory Payment Status:** Ensures that whenever a Bill record is created, the *Payment Status* field cannot be left blank, enforcing proper billing and payment tracking.

Description:

Error Condition Formula

Example: More Examples...

Display an error if Discount is more than 30%.

If this formula expression is true, display the text defined in the Error Message area.

Insert Field: Insert Operator:

Functions:

- ABS Function Categories
- ABS
- ACOS
- ADDMONTHS
- AND
- ASCII
- ASIN
- Insert Selected Function
- ABS(number)
- Returns the absolute value of a number, a number without its sign.
- Help on this function

Check Syntax: No errors found

Error Message

Example: More Examples...

This message will appear when Error Condition formula is true.

Error Message:

This error message can either appear at the top of the page or below a specific field on the page.

Error Location: ☒ Top of Page ☐ Field

Flows (Automation with Flow Builder)

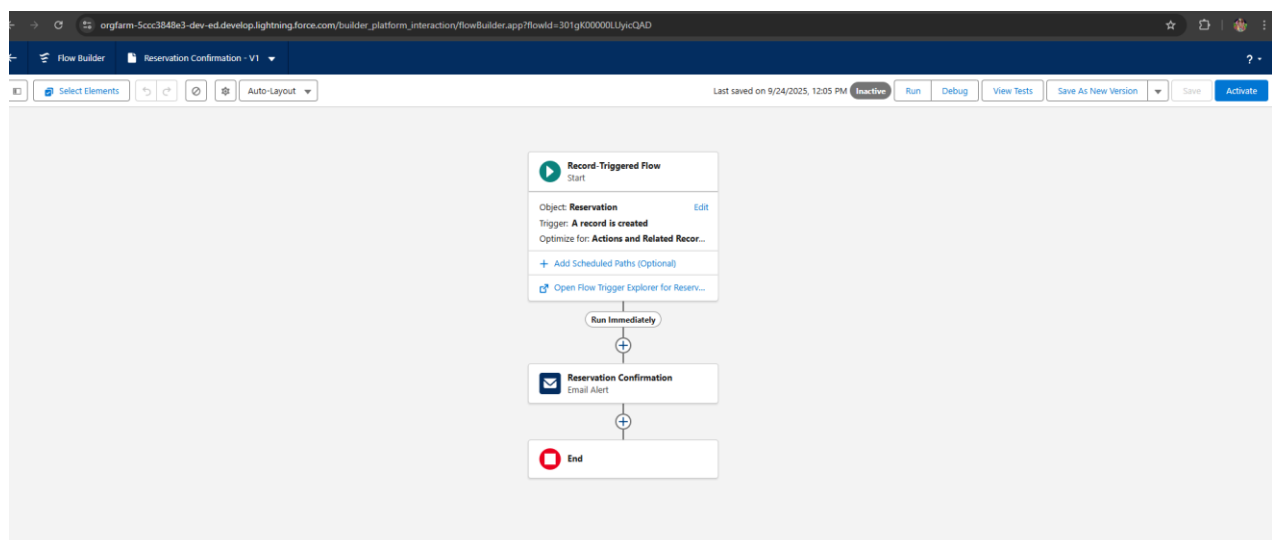

Automation & Notifications:

a) **Auto-Confirm Reservation:** A record-triggered flow on the Reservation__c object automatically sends a confirmation email or SMS to the customer whenever a new reservation is created.

b) **Reminder Notification:** A scheduled flow triggers one hour before the reservation time to send a reminder to the customer via email or SMS.

Email Alerts:

- **Booking Confirmation:** Sent to the customer immediately after a reservation is created.
- **Payment Receipt:** Sent to the customer once a Bill is marked as "Paid."
- **Special Offers:** Sent as marketing alerts to loyal customers to promote engagement and repeat bookings.

End | End

Configure Scheduled Paths

SCHEDULED PATHS

Add a scheduled path if you want a flow path to run a certain amount of time after the triggering record is created. That time can be based on the triggering event or on a specified date or date/time field in the record. A separate flow interview runs for each scheduled path. Each scheduled path interview is queued to run at the scheduled time, but can be delayed until system resources become available. Path labels appear on connectors in the canvas.

Run Immediately | Reminder 1 Hour Before

#Phase 4 Conclusion

With Phase 4, DineTrack becomes smart and automated:

- No duplicate bookings.
- Automatic confirmations & reminders for customers.
- Managers instantly alerted to cancellations or high-value sales.

This ensures better accuracy, efficiency, and customer satisfaction in the restaurant's CRM operations.
